    - Time: Year and Date
- Meaning behind data
    - Number of forest fires in Brazil based on…
        - Year
        - State
        - Month
        - Date

Data Collection Methodology:

- This data was collected directly from the Brazil government
- This dataset reports the number of forest fires in Brazil divided by states
- The series comprises the period of approximately 10 years (1998 to 2017)

This dataset intrigues me because I like how straightforward it is to understand, and after doing further research about these fires I am seeing absolutely no trend in the fires throughout the years. The fires range from 0-12 throughout the years with no specific pattern. My further research will be about what caused the jump in fires during those particular years.
